Delaware Public Service Commission
Mr. Bruce Burcat, Executor Director
Dover, DE 19904

RECEIVED
2007 DEC 11 AM 11:05
DELAWARE P.S.C.

Dear Sir.

The Legislative and Environment Committee of South Coastal Delaware AARP Chapter 5226 supports wind powered electricity for Delaware. Over the past months, we have heard much argument about the proposed deal between Delmarva Power and Bluewater Wind. The Public Service Commission has probably heard much more. Wind technology is proven and the benefits are known. What is also knowable is the dollar cost to electricity customers of wind generated power over 25 years. What is not knowable, because of variables (carbon tax or caps, health and environmental expenditures), is the dollar cost to the same customers over the same 25 years of fossil fueled energy. However, such cost is clearly imaginable. Consequently, we urge the Commission to use its imagination and vision to make the Bluewater proposal work, not just for Delmarva customers, but for all residents of Delaware. Thank you.

Robert Chin and Robert Gallagher, Co-Chairs

Subject: wind power for Delaware

Karen,

I am so pleased that the wind power negotiations seem to be progressing to the point that we can feel they are being taken seriously. I hope they win the negotiations and can start to provide power to Delaware!!!! I would much rather see our money going to this project which is sustainable and renewable, and is not going in the pockets of an overseas regime that may use the money to help terrorist's purchase arms to fight us. The price, I hope is in line with our expectations. I would be willing to pay 10% to 20% more for the wind power per KWH if it would make the deal work. Craig Hudson

Delaware Public Service Commission
861 Silver Lake Boulevard
Canon Bldg Suite 100
Dover, DE. 19904

Dear Ms. Karen Nickerson

I am writing to express my support for the offshore wind generation facility proposed by Bluewater Wind. Wind is a clean, renewable and safe energy.

I am asking you to take into consideration the true cost of coal and natural gas. Destructive mining practices create habitat disruption and species displacement and death. Carbon dioxide emissions contribute to the global warming crisis that has the potential to inundate the coast of Delaware. Mercury emissions contaminate our waterways and threaten the health of our families. Additional emissions cause numerous respiratory illnesses. Generations will be paying the healthcare and environmental cost.

Wind Power generates electricity without these unacceptable assaults on our bodies and planet. The future is NOT gas or coal fueled plants. Let Delaware be a leader by embracing local renewable energy production.

Please support the Bluewater Wind energy bid

Sincerely,

Daniel D. Snyder and Mary K. Snyder

Subject: Now Is The Time To Act!

Ms. Nickerson,

I am a retired individual living on a fixed income. I must carefully watch my expenses each month and would welcome any savings in my monthly utility bills. However, I believe we now have the opportunity to set the pattern for the future and it may cost us in many different ways. I know that I would be agreeable to have my utility bills increase if I knew it would benefit my grandchildren in the years to come. I want them to have a clean environment and don't want them to be dependent on foreign countries to stay warm in the winter. I believe that wind farms may not be the final solution but it is a positive step in the right direction.

Now is the time to act! Let's adopt wind technology and have Delaware be the leading force.

Sincerely,

Ed Duvall

Subject: Bluewater Power

As usual, Delmarva was ready with a response: unacceptable.

It is time for officials to stop listening to Delmarva's claims that they are looking out for the consumer's interests. Please, please, please put these thoughts out of your head. Delmarva has one interest in mind- Delmarva stockholders. Gary Stockbridge has interest in mind- Gary Stockbridge's job.

There are indeed a lot of issues at stake. Delmarva and the status quo should not be among them. We know Delmarva stands to lose in this deal. They would like to have total control of the power in this state forever. They have not been a consumer's advocate, nor will they be in the future. We need a new sustainable, clean source of energy for our people. I raised my children here, worried all the time about the emissions from our power plants, the oil refinery, and chemical plants. I worry about the increased risk of cancer they face just because they were raised in Delaware. Wind power offers an opportunity to reverse that fear for a new generation of children and their parents. We can make this state the cleanest and greenest state on the east coast- and at a reasonable cost for our constituents.

I grew up on the beach. I am so tired of hearing people talk about what will happen when the wind does not blow, or what this will do to the tourist trade. This wind always blows on the ocean. On a sweltering placid 90 degree day on the shore the wind factor on a boat just a couple of miles out forces one to wear a jacket. There are several windmills on the trip from Boston to the Cape. They are a tourist attraction. They are silent and beautiful. And constructing them will create jobs for our residents. Our people will become the experts in this new field of construction. They will be able to go forth with technical experience as windpower gains a foothold all over the country- as you know it will! Their time has come. We need this- for our children, for our economy, for our workers, for our future.

Please listen to the experts in this field. Please do not be waylaid by those whose financial holdings would keep us in the 20th century. Please do not cave in and extend this process. There are those in the general assembly who would cancel this project out of self interest or serious lack of knowledge. Those who haven't educated themselves- and most of them have not- either should not have a voice at this time or should not be in office at all. They do not have the best interests of the public in mind. Please listen to the voices of the future.

Thank you
Connie Merlet

Subject: Wind Power

Dear Public Service Commission representative,

I as a life long citizen of Sussex County I fully and wholeheartedly support the proposal by Bluewater Wind to bring clean, renewable energy to our state. We as citizens are usually very quite in this state, we let the decision makers decide the direction of our state. But not on this subject, we realize the importance of this issue. We need a change, we can no longer depend solely on fossil fuels for our energy needs. We as citizens have spoken, overwhelmingly in support of this proposal now it is time for you and Delmarva Power to listen.

Thank you for your time,

Mike Short

Subject: Bluewater Wind Farm

Karen,

My husband James and I would like to express our support in favor of building the Bluewater wind farm. We are in favor of any alternate energy source that will reduce our dependency on fossil fuels and that will eventually slow down the escalating costs of energy.

We feel that Delmarva Power needs the competition particularly in light of their recent exorbitant rate hikes.

Our view is that Bluewater continues to bend over backwards while Delmarva Power continues to stonewall.

Thanks in advance for your consideration and support in regards to this issue.

Subject: CANCER CLUSTER APPEAL

Dear Elected Officials: Please take note of this short, but desperate email from a 'local' resident of some 3 generations regarding Delmarva Power and what they have done to us, and continue to succeed in accomplishing due to their greedy intransigence.

I now live in an offically designated **Cancer Cluster**, Thanks to the toxic emissions of the antiquated power plant nearby. My doctors and I can attest to the fact that my lungs are painfully compromised thanks to the emissions from the plant. My breathing gets more difficult with each passing year and my life span in shortened to be sure.

My neighbors and I will gladly pay whatever it takes to correct the situation; we have testified at DNREC hearings and attended innumerable meetings to no avail. The Power company is too (pun) Powerful and entrenched.

WE all have WIND stickers on our cars; and want our officials to help ensure the safety of the next generation and our grandchildren by switching to an environmentally sound energy source.

The time for BLUewater is NOW! Election is 2008 and we vote, please remember that. We are awaiting an end to this silly dance for public opinion and, are not fooled by the spectacle. Thank you.

Subject: Blue Water Wind Project

To Whom It May Concern,

I usually do not become involved with government agencies and any decisions left to their resolution. I have come to believe that politics are politics, and government officials, too often, are concerned only about their own personal agenda - BUT - I feel a great need, a passion, to somehow express my opinion concerning the development of the Wind Park off the Delaware shore by Bluewater Wind.

It is a hope for myself and future generations, the government agencies involved will become open-minded and willing to listen and believe their citizens, such as myself, whom passionately hope Delaware will move forward to obtain an alternative source of energy as can be found using one of our greatest natural resources - the wind.

As a Baby Boomer (born 1948), a day does not pass that more acquaintances are being diagnosed with Cancer - most of these diagnoses have resulted in death. I truly believe, in my heart, it is time to do what we can, in finding and using an alternative energy that will minimize or stop generating pollutants in the air we breath. I believe this Wind Park would be a gigantic step in trying to make our earth a healthier environment.

What a wonderful message the State of Delaware would be sending to others. That they are willing to go that extra step, to move out of the past, in order to provide their citizens with an alternative source of energy creating a MUCH healthier, cleaner and safer environment. I would be proud to be part of this venture as a citizen of the State of Delaware.

I appreciate being allowed this opportunity to express my concerns and opinions.

Sincerely,

Ellen J. Roe

Subject: Clean Energy for Delaware

Dear Leaders,

I am writing to ask you to support wind power for Delaware. An agreement with Blue Water Wind will eventually provide 13 percent of Delaware's energy. That energy will be clean, independent, and stable in cost.

Please consider the detrimental impacts we all face when fossil fuel derived energy results in health issues, damaged natural resources and climate change. We can put a dollar amount to those impacts and it is MUCH higher than taking the smart step of investing in wind power.

As a Delaware native I am very proud of our state. It is your leadership that will provide us with another source of pride - innovative and smart energy. I know that there is broad public support for wind power in Delaware. Thank you for taking the time to consider this one message of the many I know you are receiving. Keep in mind that for each correspondence supporting wind energy there are many citizens who are quietly hoping you will make the right choice for them - for Delaware's future.

Subject: VOTE FOR BLUEWATER WIND'S PROPOSAL -- OFF-SHORE POWER GENERATION FOR DELAWARE

VIA: Karen Nickerson

TO: Ms. Arnetta McRae, Chair, Public Service Commission
 Commissioners, Public Service Commission
 Secretary John Hughes, Department of Natural Resources and Environmental Control

FROM: Lorraine M. and Richard A. Fleming
 19 Quail Crossing
 Wilmington, DE 19807-1138

DATE: December 11, 2007

SUBJECT: Bluewater Wind's Proposal for Off-Shore Power Generation for Delaware

Briefly said,

- Carbon taxes (or cap & trade regulations) are coming – without question.
 - Cost of power from all fossil fuel sources will increase significantly in order to comply with these regulations – but the cost of wind power will not.
 - The consultant's assessment undervalues wind power by not adequately considering this factor.
 - Like many other of life's economic trade-offs, investing a bit more in the short run can provide significant dividends in the long run.
- Advantages of wind power extend also to other health and environmental benefits.
 - NO mercury emissions and consequent human health effects.
 - NO sulfur dioxide contributions to environmentally-destructive acid rain.
 - NO emissions of nitrogen oxides, which leads to crop and lung damaging ozone
 - And, the big elephant in the tent, NO carbon dioxide pollution of the atmosphere.

The choice is quite clear.

Do we want to saddle Delaware citizens -- for the next 50 years or so – with the higher environmental and human health costs and higher long range economic costs of power generation from fossil fuels (either from Delaware plants or purchased from out-of-state power plants) ... or shall we pay a bit more now for the clearly preferred long range solution to our energy needs?

I encourage you to support the Bluewater Wind proposal as the best for Delaware. When you make a decision that will result in a new power generating facility with an expected lifetime of 50 years, it is important that you very carefully consider long range implications on the environment, the health of the citizens of the state ... and, yes, their pocketbooks.

From all these perspectives, the Bluewater Wind alternative is the wisest choice.

12/12/2007

PETITION TO DE STATE AGENCIES FROM THE TRINITY PLANET PRESERVATION TEAM

December 9, 2007

Dear Leaders of the State Agencies that Will Decide Our Energy Future,

Human activities--particularly the burning of fossil fuels for electricity generation--are increasing the atmospheric concentrations of CO2 and other greenhouse gases, have already caused global warming, climate change and immense human suffering. Leading scientists warn that we have at most only a few decades to substantially reduce CO2 emissions if we are to avoid much greater damage to the climate system, with disastrous effects on both human societies and natural ecosystems. Delaware is particularly vulnerable because of our coastal location and low average elevation.

As people of faith we implore you now to do everything in your power to promote the development of Delaware's offshore wind resources for the benefit of our children and grandchildren, and of future generations around the world.

Sincerely,

PETITION TO DE STATE AGENCIES FROM THE NEWARK SENIOR CENTER

December 11, 2007

Arnetta McRae	Chair, PSC
Russell Larson	Controller General
Jennifer Davis	Director, OMB
John Hughes	Secretary, DNREC

Dear Agency Leaders,

Human activities, especially burning fossil fuels, have already caused global climate change and human suffering. Scientists warn that we don't have much time to greatly reduce CO2 emissions if we are to avoid much greater damage to both humans and wildlife. Delaware is especially vulnerable because of our coastal location and low average elevation. On the other hand, we are blessed with an abundant natural renewable energy resource in the form of offshore wind power, waiting to be harnessed.

Please do everything in your power to promote the development of Delaware's offshore wind resources for the sake of our children and grandchildren, and for others in generations to come.

Sincerely,

12/12/2007

December 12, 2007

TO: Arnetta McRae, Chair, the Public Service Commission
Jaymes B. Lester, Member, Public Service Commission
Joann Conaway, Member, Public Service Commission
Dallas Winslow, Member, Public Service Commission
Jeffrey Clark, Member, Public Service Commission

First, please accept my gratitude for the work you and your staff have done to ensure that the letter and the spirit of H.B.6 are met. I have attended enough hearings to know that you do indeed listen.

On December 18 you and the other three agencies involved will have the opportunity to bring this long, complex and expensive process to a conclusion. I once again urge you to vote *for* Delaware's future. A vote for the offshore wind farm is a vote for the health of Delaware's present and future residents as well as a vote for the health of our planet. It is also a vote for the economic future of our state.

The agreement before you fulfills all the criteria of H.B.6. The citizens of Delaware are looking to you to set the course for clean, stable, renewable energy.

Thank you.

Sincerely,

Joanne Cabry
